

## Rotary Screens

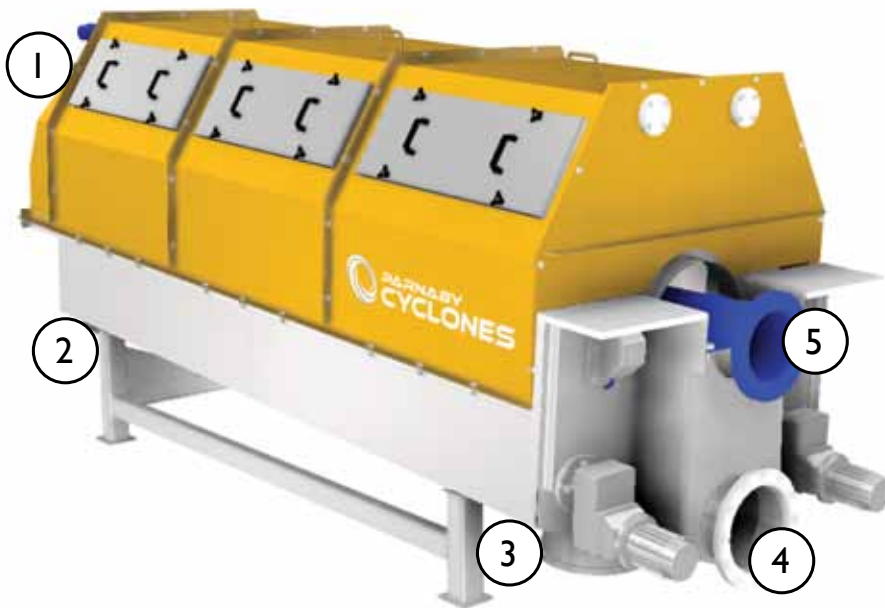

# Rotary screen

# How it works

Rotary screens suit difficult to screen materials such as fibres and organics. The main screening basket consists of a punched plate type aperture screen, which is continuously cleaned via two stainless steel spray bar systems. Screen rotation is controlled via a variable speed drive.

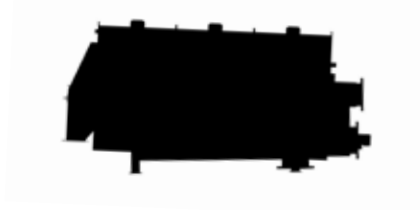

- 1. Water feed to spray system
- 2. Solids discharge
- 3. Liquid underflow
- 4. Emergency overflow
- 5. Raw feed
